

# Miic Star MS-62 Karaoke System

## How to Connect Your System

Your new Miic Star MS-62 Karaoke System comes with two ways to connect (all cables included). You have a **standard AV / RCA connection cable** which uses the red, white and yellow. This can be used in 2 ways.

For both options the single cable end, which has one black connection gets plugged into AV OUT, it must be pushed in all the way so it makes full connection.

You also get the **HDMI Connection cable** which is one single thicker cable which carries video and audio through the one connection, it needs to be plugged into the port marked HDMI.

	 <b>Standard AV / RCA Connection</b>	 <b>HDMI Connection</b>
<b>CONNECT TO TV</b>	<p>You can plug all three colours (red, white, yellow) into your TV for the sound and picture. Or you can plug just the HDMI into your TV for the sound and picture.</p> <p>However, bare in mind that your TV has small speakers and is not designed for singing karaoke. You <i>may</i> notice a delay or distortion of the music and your voice through the microphones. This is a limitation of your TVs functionality. We always recommend that you use a separate sound system for karaoke and we only ever use TVs for the picture.</p>	
<b>CONNECT TO SOUND SYSTEM</b>	<p>You can plug the yellow only into your TV, for the picture. And the red and white directly into an amplifier or powered speaker.</p> <p>Note: if you are using all three red, white and yellow AV connections do NOT plug in the HDMI Cable.</p>	<p>You can use HDMI for the TV for the picture only. And the red and white directly into an amplifier or powered speaker.</p>
<b>USE HOME THEATRE</b>	<p>Home Theatre Amplifier: Change the settings on your amplifier to 2-Channel Stereo, this will use only your main two speakers and eradicate any delay you may have (delay caused by using 5.1 Surround Sound). Note: If all your speakers are very small satellite speakers you may still need to turn the volume up considerably and you might damage your speakers. Note: We <u>do not</u> recommend the use of sound bars for karaoke whatsoever.</p>	
<b>KARAOKE AMP</b>	<p>Karaoke Mixing Amplifier: Our amplifiers all have the red and white inputs on the back, so you simply plug it in, and ensure your speakers are connected properly.</p>	
<b>POWERED SPEAKER</b>	<p>Powered Speaker: If your powered speaker has the red and white audio inputs on it then you can just plug them in directly. If your powered speaker has only got a line-in / AUX connection / headphone jack then you will need a small adaptor that converts the plug from red and white to one single headphone jack.</p>	
<b>HDMI SETTING</b>	<p>When using HDMI (video) and AV red, white (sound) together, you must change the Miic Star Setup. Menu &gt; Setup &gt; Audio Output &gt; Analog This will send the sound through AV ports and picture only through HDMI.</p>
