

Miic Star MS-62 Karaoke System

Use a Powered Speaker

The Miic Star MS-62 Karaoke System is a compact karaoke multi-media device with 2 wireless microphones. You load all your music onto the SD Card (See New SD Card Formatting Guide), plug it into your TV and sound system and start singing.

A Powered Speaker means that the amplifier is built into the same box as the speaker, an all-in-one style unit, with great sound projection, some include party lights and all include additional wireless microphones so more people can sing! If you don't have a Powered Speaker see www.portablekaraoke.com.au for more details.

In this guide, we'll explain how to use a Powered Speaker with your Miic Star. **For the best sound results...**

We recommend that you use your TV for the lyric video component and run the sound directly from the Miic Star into a Powered Speaker, Amplifier and Speakers, or Home Theatre System. Though if using a Home Theatre, we don't recommend sound bars and you should change the settings on the amplifier to 2-Channel Stereo only providing that you have two main speakers which have both a woofer and a tweeter in each to avoid damaging your home theatre speakers.

If using HDMI, for both picture and audio directly through a TV you may find you get a digital delay when singing, this is a limitation of the television and we recommend only using HDMI for the picture component and using the analogue stereo RCA cable into a Powered Speaker, Amplifier and Speakers, or Home Theatre System, as you will not experience any delays with the audio and vocals.

		Speaker Connection	
		Picture Connection	Sound Connection
Connection Must →	Plug the single end of the AV Cable included into the AV OUT on the back of the Miic Star, this must be pushed in all the way to ensure complete connection. 		
Your speaker has Red & White AV Inputs 	Option 1 – Yellow plug from the AV cable plugs into your TV's matching Yellow video (to show lyrics) input connection. Option 2 – Use HDMI from the Miic Star HDMI connection on the back direct to a HDMI input on your TV. You must then change the Miic Star Setup. Menu > Setup > Audio Output > Analog This will send the sound through AV ports and picture only through HDMI.	 <p>The red and white connectors from the AV cable go directly into your Audio Red and White AV Inputs on your speaker.</p>	
Your speaker has an AUX jack Input 	Option 1 – Yellow plug from the AV cable plugs into your TV's matching Yellow video (to show lyrics) input connection. Option 2 – Use HDMI from the Miic Star HDMI connection on the back direct to a HDMI input on your TV. You must then change the Miic Star Setup. Menu > Setup > Audio Output > Analog This will send the sound through AV ports and picture only through HDMI.	You will need a RCA (red and white) to AUX jack plug in order to connect your Miic Star to the Powered Speaker via the AUX input.
